

NEXORA Solution Document

Problem:

Conventional e-commerce requires users to manually compare products and optimize purchases.

Solution:

Use Gemini AI to understand budgets, use-cases, compatibility, and preferences. AI proposes carts instead of modifying them automatically. Users approve every recommendation.

Architecture:

React Frontend -> Express API -> Gemini Service -> MongoDB -> Payment Simulator -> Order Service.

Modules:

Storefront, AI Shop, Cart Engine, Checkout, Payment Simulator, Admin Dashboard, Analytics.

Hackathon Value:

Demonstrates AI-native commerce rather than a conventional storefront.
